

Create Column from Row Labels

Author: Autumn Laughbaum, Golden Helix, Inc.

Overview

This script allows the user to add the row labels as a column in the spreadsheet.

Recommended Directory Location

Save the script to the following directory:

***..\Application Data\Golden Helix SVS\UserScripts\Spreadsheet\Edit**

Note: The **Application Data** folder is a hidden folder on Windows operating systems and its location varies between XP and Vista. The easiest way to locate this directory on your computer is to open SVS and select **Tools >Open Folder > UserScripts Folder**. If saved to the proper folder, this script will be accessible from the spreadsheet **Edit** menu.

Using the Script

1. Open a spreadsheet and choose **Edit >Create Column from Row Labels**. Click **OK**.

A new spreadsheet with the row labels as the first column is created as a child node of the original spreadsheet.
